Spy Software

Whether you are concerned that your child may be going to websites with strong adult content, worried a teen might be sending inappropriate messages on Facebook or interested in discovering if employees are sharing company secrets with the competition, the Spysure Spy Software will provide the answers! The latest in advanced computer surveillance technology, the Spysure Spy Software will offer anyone the ability to monitor and record all computer activity covertly!

Find out what private messages are being sent on social networking sites such as Facebook, record every email a teen or employee sent/received, block access to "off-limit" websites, record every website a person visited and more with this affordable and technologically advanced computer surveillance spy software!

It records all emails and chat messages, keeps a list of websites visited, and captures screen shots at regular intervals. The PC monitoring device can be set to operate in stealth mode so that no one but you will know it is watching.

Why Spy Software Is For You!

Unlike keystroke recorders that can only capture what a person types, the Spysure spy software will also take screen shots at regular intervals, block websites of your choice, document the sites any person visited and more. The easy to install computer surveillance software can be set to operate secretly in the background, preventing any user from ever knowing that they are being monitored.

Spy Software Recorder Features:

Sophisticated Internet Website Monitoring That Documents Every Website Visited
Email Monitoring Tool That Will Document & Store Every Sent/Received Email
Internet Blocking Tool That Will Prevent Access To Websites Of Your Choice
Keystroke Logger Will Capture & Store Used Passwords & Every Letter Typed
Stealth Mode Feature: Monitors All Computer Activity Covertly
Screen Capture Mode: Will Instantly Take Snapshots Of What Is Being Viewed On The Computer Screen Anytime
Monitor Chat Room Activity: Spy Software Will Record Every Message Sent/Received On Any Social Networking Site Such As Facebook, MySpace, Yahoo/MSN Chat Rooms & More!
